

Smart Vend Corporation

Vending CAD

Vending Card Acceptance Device

Optimize your vending services, with cashless vending using the Smart Vend Vending CAD. The terminal allows users to pay for vended items from their superVISorNet account using a swipe or proximity card, removing the need for cash. The Vending CAD supports MDB protocol, used in a wide range of industry standard vending machines. Funds availability is assured by the on-line superVISorNet Transaction Management System. Detailed reporting tracks item usage providing the information needed to ensure the vending machine is always fully stocked.

Convenient

An on-line card payment system increases the convenience to users, by improving access to and security of your vending machine. The added convenience of being able to use their account card, rather than cash, can increase usage.

Dynamic

The Vending CAD uses your existing Ethernet network to connect to the powerful Smart Vend superVISorNet Transaction Management System. Delivering real time transactions, device usage, remote diagnostics and support capability. The terminal supports fixed or dynamic IP address allocation and all data is encrypted for security.

Transparent

The Vending CAD, through web based reporting, provides details of machine usage. These include the product dispensed, the price paid for them, including any discounts, and the time of the transaction. The terminal supports the use of a 'service card'. This card may be swiped at the terminal when it is refilled with product or when reporting on product usage up to that point. The vending usage report will then detail transactions between use of the service card. This information assists stock control potentially eliminating stock outs and lost revenue.

Features:

- Cashless food and beverage vending
- Full on-line transaction recording and reporting
- Centralized control, audit & management
- Key pad and card insertion or proximity operation

Technical Specifications

For Users

- Easy to use with cashless convenience
- Choice of cash or card payment method
- 24 hour access to vended items
- Security through PIN protection
- Protection if card is lost or stolen, as no value is stored on the card
- Off-line capability during network failures ensures service availability
- Support for Single or Multiple Vending
- Can be used to add value to a Smart Vend superVISorNet account

For the Service Provider

- Secure access, user authentication and credit validation
- Audit accountability and customized reporting
- Real time transaction monitoring allowing optimal stock levels
- Supports identification by magnetic stripe insertion, proprietary card, key pad or externally mounted Mifare or HID card readers
- Remote diagnostic and support capability
- Decrease cash collection overheads

Technical Specifications* Model VN125

Dimensions	3.94" wide x 5.2" high x 6.22" deep
Mounting Depth	4.72" + cables
Case	Anodized Steel
Weight	2.2 lbs
Display	16 character x 2 lines Supertwist backlit LCD
Card Reader	ISO 2894 Read Only (Track 2) magnetic insert card reader
Keypad	12 key key pad and labeled function keys
Power Supply	9-40V DC
Memory	512k Flash EPROM, 1M RAM (battery backed)
IP	Ethernet 10 base-T, 128 bit encrypted TCP/IP protocol
Interface	MDB serial
Clock	Battery backed realtime and date clock
