Cashfree Campus

Cashfree Campus Management Service

Creating a cashfree environment on campus and online where users can add value to their Monitor account online by credit card, manage their own accounts, pay course fees, view transaction history and enable regular reporting.

MONITOR
Transaction Management

Cashfree Solution

Let's face it, using cash is inconvenient for your students and a hassle for you. Wouldn't it be great to have a Transaction Management System that minimized or eliminated cash handling? Imagine being able to see how every service is being used, and to be able to define who could use which service and when. Supervisor Net from Monitor is just such a system. Integrating traditional copy and print, along with vending, laundry and a host of other services, Monitor gives you total control.

Monitor's Total Solution to Transaction Management

Monitor's Supervisor Net provides the facility to monitor, recover and allocate costs for services throughout your campus. These services can include photocopiers, printers, computers, facsimile machines, telephones, vending machines, parking, laundry machines, retail point of sale services, in fact anything where you wish to charge for units or time.

Simplicity of Use

The design philosophy of Monitor has focused on providing solutions that are simple to use for both yourself and your end users. Monitor's terminals use simple customizable prompts to assist with making them even more user friendly. Supervisor Net has been designed so that many routine tasks may be automated reducing administrative overhead.
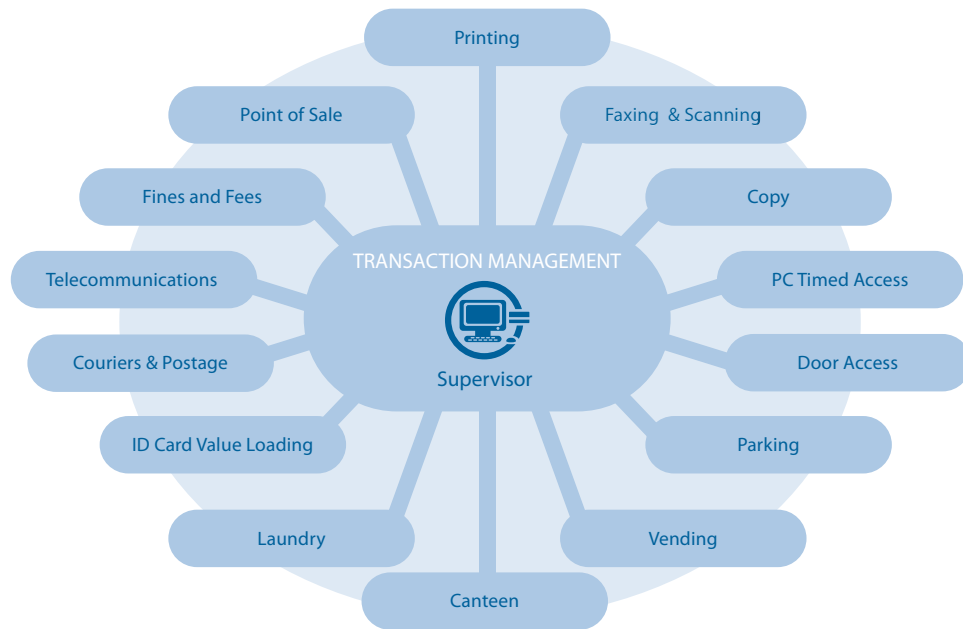

Use any Card

If your campus already uses a student ID card that is a Mifare, proximity or magnetic stripe type, Monitor can use the card's unique ID code to access the user's account. Interfacing to an existing student database is possible to provide security, accuracy and a minimum amount of administration effort.

Secure Operation

Supervisor Net is specifically designed to provide total accountability and security. As no value is stored on the cards if a card is lost or stolen it doesn't really matter. Simply lock out that card and assign a new card to the user. All account values are stored in a central server which can be located in a secure location. Access to the system can be controlled by comprehensive security permissions. PIN numbers may also be used for complete security of card holders funds.

Integration of Student and Staff Requirements

With one solution you can manage both student and staff requirements. Students use debit cards with PIN numbers and are able to use selected services with the funds which have been prepaid into their accounts.

Staff may use credit accounts as well as a personal debit account, all with a single card. Use of cost center reference codes allows the cost of administrative functions to be automatically allocated to the appropriate account. Credit limits can be applied to individual staff members or to a departmental account accessed by a number of staff members.

Data exports of staff account use may be directly sent to the accounting software for disbursement to the appropriate department.

Transaction Recording and Accountability

The Supervisor Net server continually records the details, including date, time, Monitor terminal number, quantity and cost of each chargeable service for every transaction performed by the Monitor Transaction Management System. All add-value transactions are similarly recorded. Running

account balances are maintained along with last activity dates for each account.

The database is updated at the completion of each transaction so the audit trail and account details are always up to date. These may be interrogated at any time by an operator, providing a full cost reconciliation for all aspects of your operation.

Management Reporting

Knowledge enables informed decisions to be made and a suite of browser based reports are available to show daily, monthly, and yearly usage of each chargeable service. This allows account budgeting and optimizing of the services provided at each location. The data is also able to be exported to external programs for additional reporting.

Multiple Charging Rates

Multiple charging rates are available for different types of services and groups of users. Staff, students and casual users can be charged different rates for each service. The number of different services and charges available is unlimited making the Monitor Transaction Management System an extremely powerful tool.
